## RMA WATER LEVEL STATISTICS AND PLOTS

AUGUST 1985

This report provides four types of information for each well sampled on the Rocky Mountain Arsenal between June 1981 and July 1985. The information includes: 1) well information, 2) water level statistics, 3) water elevation plots and 4) listings of water level data sorted by sample date.

### WELL INFORMATION

**WELL** (well number) is made up of the section number (01-36) and the well number (001-010, etc.) within the section.

**EAST AND NORTH COORDINATES** are state planar.

**AQUIFER TYPE** is the aquifer where the well's screen is located. The codes associated with it include:

- ALL** - Alluvium
- ALX** - Alluvium, out of service
- DEN** - Denver
- DEX** - Denver, out of service

**SURFACE (MSL) ELEVATION** is the mean sea level elevation of the ground where the well is located.

### TOP AND BOTTOM OF SCREEN ELEVATIONS

### WATER LEVEL STATISTICS

**TIME SPAN** during which the water levels were taken.

**QTR** (quarter) corresponds to one of the four sampling periods during a year when the water levels are measured. Seasonal variation in some wells have made the quarterly breakdown necessary. Examination of means, standard deviations and the water elevation plot will help determine if seasonal variation does exist. Statistics for the combined (**COMB**) water levels are included should no seasonal variation be found.

**MEAN DEPTH (FT)** is the average depth to water measured from the top of ground. Water depth is measured to the nearest one hundredth of a foot. The code "ERR" will appear if the sample size is zero.

**STD DEV. DEPTH** is the unbiased standard deviation (i.e. N-1 in denominator) of the depth to water measured from the top of ground. Approximately 68% of the water depths can be expected to fall between the mean and plus or

minus 1 standard deviation. It is computed to the nearest one hundredth of a foot. The standard deviation can not be computed if the sample size is less than 2. The code "ERR" will appear under this condition.

**99% CONFIDENCE INTERVAL** for DEPTH was computed by using the unbiased standard deviation and the "t - value" corresponding to the appropriate degrees of freedom (N-1). With regard to interpretation, we can state that 99% of the intervals so obtained would include the population (true) mean and that approximately 1% would not. The confidence interval is computed to the nearest one hundredth of a foot. It can not be computed if the sample size is less than 2. The code "ERR" will appear under this condition.

**MEAN ELEV.** is the average water elevation measured to the nearest one hundredth of a foot. The code "ERR" will appear if the sample size is zero.

#### **WATER ELEVATION PLOT**

The water elevations are plotted for each well sampled from 1981 to the present. If multiple water measurements were taken during the same quarter of the same year, the average of these measurements was plotted. A list of abbreviations used with the elevation plots follows.

**TOG** - Top of Ground (i.e. mean sea level) elevation.

**TOS** - Top of Screen elevation.

**BOS** - Bottom of Screen elevation.

**NOTE:** The water level elevations will be represented by small boxes. The boxes will be connected by a line when contiguous measurements exist.

#### **WATER LEVEL LISTING**

**WELL** (well number) is made up of the section number (01-36) and the well number (001-010, etc.) within the section.

**BEDROCK DEPTH** is the depth to bedrock measured to the nearest one hundredth of a foot. The value will be blank when no bedrock depth information is available.

**BEDROCK ELEVATION** is measured to the nearest one hundredth of a foot. The value will be blank when no bedrock depth information is available.

**SAMPLE DATE** is in month, day then year format. The listing is sorted by sample date.

**QTR** corresponds to one of the four sampling periods during the year when the water levels are measured.

**WATER DEPTH FROM GRND (ft)** is measured to the nearest one hundredth of a foot.

**WATER ELEVATION** is measured to the nearest one hundredth of a foot.

**SAT THICK** is the saturated thickness and is computed by subtracting the bedrock elevation from the water elevation. Zeros will appear if the bedrock elevation is not known or if the saturated thickness is found to be negative.

**REMARKS** will include any special information concerning the well or the measurement. Water levels falling below the bottom of screen will have "DRY" in the REMARKS column. Wells which are clogged, destroyed or coded as being dry will also have an appropriate message in the REMARKS column.

#### **IMPORTANT**

It must be noted that the water depths included in this report are computed values determined by subtracting the water elevations from the most recent surface (MSL) elevation of the well being sampled. The water depths do not therefore correspond to the depths recorded in the RMA Water Level Log Books. (The depths recorded in the log books were measured from the top of casing. These depths were subtracted from the well's top of casing elevation to determine the water level elevations.)

If a site was resurveyed, a consistent increase or decrease in a water elevation (or computed depth from ground level) beginning at a particular point in time may occur as a result of measurement error between surveys. RMA geo-hydrologists have requested that we not change earlier water level measurements to correspond to the most recent survey data until after all such cases are identified and evaluated.

Records indicating that a well was blocked, clogged or destroyed were not considered "DRY" and therefore not included in the statistics or the water elevation plot. Records indicating that the well was "DRY" were not included in the statistics section but were included in the water elevation plot and the data listing. Water elevations falling below the bottom of screen were also considered "DRY". All "DRY" records were coded to

have elevations falling two feet below the bottom of screen on the water elevation plot. Finally, water level records could not be processed for wells which have no elevataion data and/or screen information.
